

## Discovery® Open-area Sounder Beacon Installation Guide

### General

This guide refers to the products in the table below.

| Part number | Product Name                                                  | Type             |
|-------------|---------------------------------------------------------------|------------------|
| 58000-005   | Discovery Open-area Sounder Beacon Red Base with Red Lens     | Outdoor (Type B) |
| 58000-007   | Discovery Open-area Sounder Beacon White Base with Clear Lens | Outdoor (Type B) |

The Discovery Open-area Sounder Beacon is supplied with an isolating base.

### Warning

The Discovery Open-area Sounder Beacon requires compatible control panel software to operate. Please check with the panel manufacturer for compatibility before installation.

### Function

The Open-area Sounder Beacon combines a sounder with a beacon in a weatherproof housing. It has up to 15 tone pairs, 7 volume settings, independent control of sounder and beacon and fast turn-on functions. The configuration of the sounder is set by the control panel. Please refer to the panel literature for details.

### Installation

- Drill out the cable entries as required on the base using a 20mm hole cutter, taking care not to damage the electronics. Do not attempt to knock these out as the base could be damaged.
- Secure the base to the mounting surface with pan-head screws. If IP65 integrity is required, fit the weatherproof mounting pad between the base and the mounting surface. Fit the 'O' ring to the base (Fig 1) using a lubricant such as silicone grease.
- Set the sounder address using the table overleaf.
- To lock the sounder in the base, snip the break-out on the base rim (location shown in Fig 1). Fit the sounder to the base.

### IP rating

To maintain the integrity of the enclosure it is essential that suitable IP rated cable glands be used along with the 'O' ring provided and weatherproof mounting pad.

### Tone Table

| Byte Value | Primary Tone                        | Frequency                              | Tone No. | Secondary Tone                        | Frequency                    | Tone No. |
|------------|-------------------------------------|----------------------------------------|----------|---------------------------------------|------------------------------|----------|
| 1          | Apollo Evacuation Tone*             | 558Hz for 0.5s, 840Hz for 0.5s         | T1       | Apollo Alert Tone                     | 1s off, 1s 840Hz for 1s      | T0       |
| 2          | Alternating - (Hochiki & Fullerton) | 925Hz for 0.25s, 628Hz for 0.25s       | T12      | Continuous (Hochiki & Fullerton)      | 925Hz                        | T11      |
| 3          | Medium Sweep                        | 800Hz to 970Hz at 1 Hz                 | T14      | Continuous                            | 970Hz                        | T13      |
| 4          | Fast Sweep                          | 2500Hz - 2850Hz at 9Hz                 | T16      | Continuous                            | 2850Hz                       | T15      |
| 5          | Dutch Slow Whoop (sweep)*           | 500 Hz - 1200Hz for 3.5s, 0.5s off     | T3       | Continuous                            | 825Hz                        | T2       |
| 6          | DIN Tone (sweep)*                   | 1200Hz - 500Hz for 1s                  | T4       | Continuous                            | 825Hz                        | T2       |
| 7          | Swedish Fire Tone                   | 660 Hz, 150ms on, 150ms off            | T18      | Swedish all clear signal - Continuous | 660Hz                        | T17      |
| 8          | Aus (fast rise sweep)               | 3 x (500 - 1200Hz for 0.5s), 0.5s off  | T6       | Aus Alert tone                        | 420Hz 0.625s, 0.625s off     | T5       |
| 9          | NZ (slow rise sweep)                | 500Hz - 1200Hz for 3.75s, 0.25s off    | T7       | NZ Alert Tone                         | 420Hz 0.625s, 0.625s off     | T5       |
| 10         | US Temporal LF (ISO 8201)           | 3 x (970Hz, 0.5s on, 0.5s off) 1s off  | T19      | Continuous                            | 970Hz                        | T13      |
| 11         | US Temporal HF (ISO 8201)           | 3 x (2850Hz, 0.5s on, 0.5s off) 1s off | T20      | Continuous                            | 2850Hz                       | T15      |
| 12         | Simulated Bell - Continuous         | n/a                                    | T8       | Simulated Bell - Intermittent         | 1s off, 1s on                | T9       |
| 13         | Emergency Warning Siren             | n/a                                    | T10      | Emergency Warning - All Clear         | n/a                          | T10      |
| 14         | Evacuation Tone                     | 970Hz continuous                       | T13      | Alert Tone                            | Silence for 1s, 970Hz for 1s | T19      |
| 15         | Apollo Evacuation Tone*             | 558Hz for 0.5s, 840Hz for 0.5s         | T1       | Apollo Alert Tone                     | 1s off, 1s 840Hz for 1s      | T0       |

\* EN54 Compliant Analogue Values

| Analogue Value | Status                  | Analogue Value | Status           |
|----------------|-------------------------|----------------|------------------|
| 0              | Flash Memory Fail       | 17             | Sounder Volume 1 |
| 1              | Sounder Fail            | 18             | Sounder Volume 2 |
| 2              | Beacon Fail             | 19             | Sounder Volume 3 |
| 3              | Sounder and Beacon Fail | 20             | Sounder Volume 4 |
| 4              | General Fault           | 21             | Sounder Volume 5 |
|                |                         | 22             | Sounder Volume 6 |
|                |                         | 23             | Sounder Volume 7 |

**Wiring Diagram  
Individual Address Setting**

Fig 1. Wiring diagram

The address of the Open-area sounder beacon is set using segments 1-7 of the DIL switch. Each switch is set to "0" (ON) or "1", using a small screwdriver or similar tool. A complete list of address settings is shown below.

| addr | DIL switch setting | addr | DIL switch setting | addr | DIL switch setting | addr | DIL switch setting | addr | DIL switch setting |
|------|--------------------|------|--------------------|------|--------------------|------|--------------------|------|--------------------|
| 1    | 1000000            | 11   | 1101000            | 21   | 1010100            | 31   | 1111100            | 41   | 1001010            |
| 2    | 0100000            | 12   | 0011000            | 22   | 0110100            | 32   | 0000010            | 42   | 0101010            |
| 3    | 1100000            | 13   | 1011000            | 23   | 1110100            | 33   | 1000010            | 43   | 1101010            |
| 4    | 0010000            | 14   | 0111000            | 24   | 0001100            | 34   | 0100010            | 44   | 0011010            |
| 5    | 1010000            | 15   | 1111000            | 25   | 1001100            | 35   | 1100010            | 45   | 1011010            |

**Commissioning**

It is important that the device be fully tested after installation. Many fault conditions are the result of simple wiring errors. Check all connections to the unit.

**Setup and Test Mode**

These modes allow volume adjustment and functional testing locally. In test mode no volume adjustment is possible.

The required mode is entered via the control panel and is confirmed by a red LED which flashes once a second on the sounder beacon. Sounder state is controlled by placing a magnet adjacent to the flashing LED. When all LEDs flash, withdraw the magnet. A suitable extendable magnetic wand is available, part no. 29650-001.

In setup mode the volume can be adjusted by holding the magnet adjacent to the flashing LED and removing it at the desired volume level. If min or max volume is reached, the LEDs stop flashing. To alter the direction of adjustment, remove the magnet for one second and re-apply. Saving the volume setting is performed at the control panel.

*Please check with panel manufacturer for compatibility of the above setup/test modes.*

**Technical Data, Sounder**

|                                                 |                          |

| Beacon operated                                 | +3mA                     |
| * not EN54-3 compliant                          |                          |

*For sound pressure levels measured to EN54-3 see document PP2203 and for isolator operation information see document PP2090, both available on request.*

**Fault Finding**

| Problem                         | Possible Cause                                                                         |
|---------------------------------|----------------------------------------------------------------------------------------|
| No response or missing          | Incorrect address setting<br>Incorrect loop wiring (polarity reversed)                 |
| Device fails to operate         | Control panel has incorrect cause and effect programming                               |
| Device difficult to fit to base | Insufficient lubricant on 'O' ring                                                     |
| Water ingress                   | Weatherproof mounting pad missing or damaged<br>Incorrect cable glands<br>Damaged base |
